

PERFORMANCE

The Citation X is the fastest, most time-efficient business jet ever built.

At Mach .92, the Citation X will run the mile in a sizzling 10 seconds. It will streak from Los Angeles to New York in just over four hours. That's a time savings of around an hour compared to some considerably more expensive aircraft. The Citation X can cross half a dozen time zones without a refueling stop.

Much of the Citation X's speed and efficiency can be attributed to its Rolls-Royce engines. Designed for the rugged demands of regional airline and military operation, the high-bypass AE3007C1 turbofan engine has been custom-tailored to the Citation X.

VALUE

Cessna Citations have historically held their value better than any other comparable aircraft.

COMFORT

If it doesn't feel like a mid-size business jet inside, that's because it isn't. The Citation X cabin has created its own category – with one of the widest, most spacious and stunningly attractive interiors ever crafted for a Cessna Citation.

Densely pillowed seats beckon you to sink deeply into the wide-body-jet size cushions. Generous head and shoulder room gives each passenger his or her own ample space.

CONVENIENCE

The tail cone baggage compartment houses 72 cubic feet of heated and pressurized storage for luggage and gear. There's even an additional 10 cubic feet just for your favorite skis.

Additionally, the spacious dressing area offers a closet large enough to store carry on items and other baggage.

X CESSNA CITATION

If you travel longer distances with 8 passengers or less, then this is *Where You Belong*®.

MAXIMUM PASSENGERS	8
MAXIMUM SPEED (MPH)	604
MAXIMUM ALTITUDE IN FEET	51,000
CABIN DIMENSIONS IN INCHES	66W/287L/68H
MAXIMUM RANGE IN STATUTE MILES	3,253
INTERIOR BAGGAGE IN CUBIC FEET	20
EXTERIOR BAGGAGE IN CUBIC FEET	82

Actual ranges will vary based on present day conditions, speed, number of passengers and baggage. The range assumptions above contemplate statute miles, standard atmospheric conditions, historic wind averages, CitationAir fuel reserves, and standard baggage at 30 pounds per passenger.

Due to the Citation X's high approach speed category, some airports may be restricted due to terrain and/or runway limitations.
